

## **Medical Aspects of Technical Rescue (3 hours)**

Pre-Requisites: Age 18 and up

PA DOH EMS Con-Ed: 3.0 clinical hrs

Maximum Students: 30

Technical rescuers must have a strong understanding not only of medical considerations that affect their ability to perform but must also understand the patient care that needs to be delivered in the field in order to perform a successful rescue operation. Appropriate treatment started during a technical rescue will minimize pain and suffering and possibly save the individual's life. This class will start with a review of medical considerations pertaining to the rescuer and conclude with considerations for patient care in the technical rescue environment. This class is highly recommended for both EMS trained and non-EMS trained rescuers.
